Application/Control Number: 09/901,892 Page 2

Art Unit: 1743

1. Claims 7, 9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

- 2. In claim 7, it is unclear whether the covers referred to are the segments or additional covers. In claim 9, "two surfaces of a portion inclined...with its upper..." is unclear.
- 3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:
- A person shall be entitled to a patent unless –
- 5. (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
- 8. Determining the scope and contents of the prior art.
- 9. Ascertaining the differences between the prior art and the claims at issue.
- 10. Resolving the level of ordinary skill in the pertinent art.
- 11. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Art Unit: 1743

- 12. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 13. Claims 1-4, 9-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO97/09621 (hereafter WO) in view of Liston et al.
- 14. The examiner notes that US Patent No. 6,440,369 is a 371 of PCT/JP96/02490 corresponding to WO97/09621. Thus, US Patent No. 6,440,369 is relied upon as a certified translation of WO97/09621, and references to column and line citations in 6,449,369 will be used in discussing WO97/09621.
- 15. WO teaches sample table 12, reagent table 22, and reaction table 3. Transparent (col. 4, line 67), curved cover 30 covers part of top plate 41, leaving table 12 mostly or completely exposed (Figures 1, 3). Parts of cover 30 are perpendicular to top plate 41 and portions extent toward the user. An indicator 42 is used to indicate when table 12 is stopped and it is safe to add a sample (col. 5, lines 31-62). The indicator is unilluminated when the table 12 is stopped and illuminated green when it is moving.
- 16. WO fails to teach illuminating the indicator when the rotor is stopped.

Art Unit: 1743

- 17. Liston et al teaches a device similar to that of WO. An indicator is illuminated one color when the table is stopped and another when it is moving (col. 6, lines 35-50).
- 18. It would have been obvious to illuminate the indicator of WO when the table is stopped in order to provide positive illumination signaling of both the stopped and moving conditions as taught by Liston.
- 19. Claims 5-8, 10 are rejected under 35 U.S.C. 102(b) as being anticipated by WO97/09621 (hereafter WO).
- 20. The examiner notes that US Patent No. 6,440,369 is a 371 of PCT/JP96/02490 corresponding to WO97/09621. Thus, US Patent No. 6,440,369 is relied upon as a certified translation of WO97/09621, and references to column and line citations in 6,449,369 will be used in discussing WO97/09621.
- 21. WO teaches sample table 12, reagent table 22, and reaction table 3.

 Transparent (col. 4, line 67), curved cover 30 covers part of top plate 41, leaving table 12 mostly or completely exposed (Figures 1, 3). Sample table cover 10 is divided in two segments by safety groove 46a, and the surfaces of the groove constitute the instant protection plate. Part of the rear segment of cover 10 is under cover 30 as shown in figure 1, whereas the front segment is not.
- 22. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- 23. Umetsu teaches sample table 10 protruding from lid 61 (Fig. 2).
- 24. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jan M. Ludlow whose telephone number is (703) 308-
